

# Test Results and Interview Guide

Candidate: Richard Wantsajob

Assessment: Simulación del lugar de trabajo: servicio al cliente

Completed: May 17, 2025 Prepared for: Sara Maple

**Example Company** 

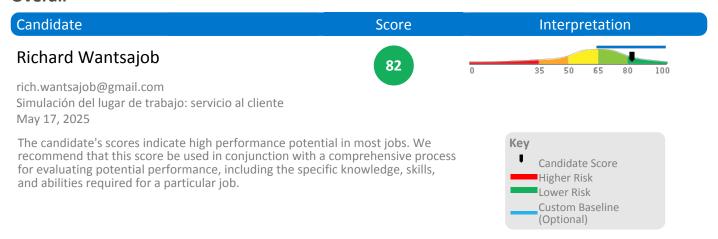

## What's Included

- Overall Score
- Competency Summary Table
- Comparison Matrix
- Detailed Competency Results with Interview Guide

**Important Note:** The Simulación del lugar de trabajo: servicio al cliente assessment measures key factors related to high performance and tenure in this job. Attribute types measured vary by test, but can include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

### **Overall**

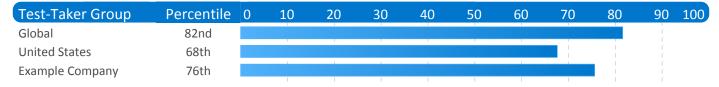

## **Competency Summary**

## Comparison

Percentile scores indicate how the candidate compares to other test-takers within various groups. The candidate scored equal to or better than the fraction of test-takers indicated by the percentile.

#### **Assessment Overview**

This assessment provides scores for a number of important factors and competencies that are related to success on the job. Scores are presented based on their potential impact on job performance.

Scores are presented individually on a scale of 0-100. In most cases, including the overall score, higher scores represent higher expected job performance. However, for some competencies, either extreme low or extreme high scores indicate a risk of lower performance. Refer to the interpretation section of each competency for additional information.

Individual competency scores are also combined into a single overall score. Please note that individual competencies are weighted differently, depending on their type, and on fine adjustments based on data from the US Government's Occupational Data Network (O\*Net).

Each competency measured includes one or more suggested interview questions, in an easy-to-use format. These questions should be used for additional probing, especially when the score shows an area of relative weakness.

Some of the competencies measured evaluate preferences for doing (or not doing) specific activities. Scores for these competencies can be used to evaluate job-fit.

We wish to emphasize that the data contained in this report should be used as part of a comprehensive process for evaluating job candidates. Additional data should include in-person interviews, job tryouts, resume review, and background checks.

#### Detail

Candidate: Richard Wantsajob, rich.wantsajob@gmail.com

Assessment: Simulación del lugar de trabajo: servicio al cliente

Authorized: May 17, 2025, by Sara Maple, Example Company, qamailsaram.mike@hravatar.com

Started: May 17, 2025, 7:54:20AM EDT Completed: May 17, 2025, 7:54:20AM EDT

Overall Score: 82

# **Cognitive Abilities Detail**

This section contains a list of job-related cognitive abilities that have been evaluated in a job-like context using simulation technology. Studies have demonstrated that cognitive abilities are highly correlated with job performance for many jobs. Abilities also correlate with problem-solving and the ability to learn quickly.

## Analytical Thinking and Attention to Detail Score: 82

#### Description:

Detail

This scale represents thoroughness, accuracy, and being concerned for all areas involved no matter how insignificant. Individuals who demonstrate high Attention to Detail produce work products that are consistently accurate and require little checking. They rarely forget schedule commitments or overlook even the smallest details.

#### Interpretation:

High scores in this area correlate with superior performance for many jobs.

Able to achieve a high degree of thoroughness and accuracy in a work task. Concerned for all areas involved. Work products require little or no review or checking to maintain consistency.

#### **Interview Guide**

Can you give me an example of where your attention to detail or your thoughtful analysis of a situation helped make a project successful?

Poor example.

Does not show

attention to detail

or analytical ability.

7

3

5

Moderately relevant or impactful example.

Strongly relevant and clear example.

# **Identity Confirmation Photos**

The following photos of the candidate and any identification were uploaded during the assessment session.

## **Photo Analysis Results**

| - Risk:                               | Medium risk of cheating based on image inconsistencies |
|---------------------------------------|--|
| - Percent match among processed faces | 100%   |
| - Total images processed              | 17   |
| - Total images with valid faces       | 14 (82%)   |
| - Total pairs of faces compared       | 13   |
| - Pairs in which faces matched        | 13 (100%)  |
|                                       |  |

## **Report Preparation Notes**

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the
  assessment is scored. As additional instances are completed, the comparative data may change. You can always update a
  report to the current values by clicking on 'Recalculate Percentiles' within the online results viewing pages at
  www.hravatar.com.
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the
  average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this
  value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.

## **Score Calculation Detail**

The following table provides a summary of how the overall score was calculated from the individual competency scores. Competency scores are calculated on a 0-100 scale by first calculating a Z statistic based on test-taker responses and then transforming the Z value to a scale with target mean and standard deviation. Certain competencies have a normal score distribution where it is best to be closest to the mean. For these competencies we modify the Z statistic by multiplying its absolute value by minus 1 for the overall score calculation. Next, to calculate the overall score, a weighted average of all modified competency Z statistics is computed and this weighted average is itself transformed to a Z statistic, which is then transformed to a score with the same target mean and standard deviation. Finally outlier scores are adjusted if they are below 0 or above 100.

| Competency                                      | Score   | How applied to overall | Score Value Used | Weight (%) |
|---|---------|------------------------|------------------|------------|
| Analytical Thinking and<br>Attention to Detail  | 82.8929 | Z-Statistic            | 1.1929           | 100.0000   |
|   | . 7.0   |                        |                  | 1.1929     |
| Weighted Average of Competency Z-Scores:        |         |                        |                  |            |
| Mean applied to Raw Weighted Avg:               |         |                        |                  |            |
| Standard Deviation applied to Raw Weighted Avg: |         |                        |                  |            |
| Normalized Raw Score:                           |         |                        |                  |            |
| Mean:   |         |                        |                  |            |
| Standard Deviation Used:                        |         |                        |                  |            |
| Final Overall Score:                            |         |                        |                  | 82.8929    |
|   |         |                        |                  |            |
