

Candidate: **Betty Penske**
Assessment: Basic Digital Literacy
Completed: October 18, 2021
Prepared for: Susan Bookman

Test Results and Interview Guide

The Basic Digital Literacy assessment measures key factors related to high performance and tenure in this job. Attribute types measured include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

Overall

| Candidate | Score | Interpretation |
|---|-----------|--|
| Betty Penske bettypenske@yourcompany.org Basic Digital Literacy October 18, 2021 The candidate's scores indicate moderate to high performance potential in most computer related jobs. We recommend that this score be used in conjunction with a comprehensive process for evaluating potential performance, including the specific knowledge, skills, and abilities required for a particular job. | 71 | Key ▼ Candidate Score Higher Risk Lower Risk Custom Baseline (Optional) |

Competency Summary

| Competency | Score | Interpretation |
|--|-------|----------------|
| Skills/Knowledge (relates to immediate readiness) | | |
| Basic Digital Literacy | 71 | |

Comparison

Percentile scores indicate how the candidate compares to other test-takers within various groups. The candidate scored equal to or better than the fraction of test-takers indicated by the percentile.

| Test-Taker Group | Percentile | 0 | 10 | 20 | 30 | 40 | 50 | 60 | 70 | 80 | 90 | 100 | |
|------------------|------------|---|----|----|----|----|----|----|----|----|----|-----|--|

| United States | 59th | | | | | | | | | | | | |
| HR Avatar Data | 65th | | | | | | | | | | | | |

Assessment Overview

This assessment provides scores for basic digital literacy helpful for success on the job. Scores are presented based on their potential impact on job performance.

Detail

Candidate: **Betty Penske**, bettypenske@yourcompany.org
 Assessment: Basic Digital Literacy
 Authorized: October 18, 2021, by Susan Bookman, HR Avatar Data Collection Account, sue.bookman@richardson.biz
 Started: October 18, 2021 at 5:43:40 PM EST
 Completed: October 18, 2021 at 5:43:40 PM EST
 Overall Score: 71

Knowledge and Skills Detail

This section contains a list of job-related knowledge areas and skills that have been evaluated. Low scores in these areas often indicate that additional learning may be required before top performance can be achieved.

| Detail | Interview Guide |
|---|-----------------|
| <p>Basic Digital Literacy Score: 71</p>  <p><i>Description:</i> Evaluates a candidate's knowledge of basic digital literacy, including popular applications, internet privacy, password security, backup, using web search, sending email, and using mobile devices.</p> <p><i>Interpretation:</i> Candidate should achieve above average job performance in this area with little or no training.</p> <p>Above average. Familiar with operating systems, the web and applications.</p> | |

Identity Confirmation Photos

The following photos of the candidate and any identification were uploaded during the assessment session.

Photo Analysis Results

| | |
|---------------------------------------|--|
| - Risk: | Medium risk of cheating based on image inconsistencies |
| - Percent match among processed faces | 100% |
| - Total images processed | 17 |
| - Total images with valid faces | 14 (82%) |
| - Total pairs of faces compared | 13 |
| - Pairs in which faces matched | 13 (100%) |

Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the assessment is scored. As additional instances are completed, the comparative data may change. You can always update a report to the current values by clicking on "Recalculate Percentiles" within the online results viewing pages at www.hravatar.com.
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 - 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 - 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.
- For non-linear competencies, scores in the middle are more desirable. For these scales a score between 50 and 80 (dark green) represents scores that are within 1 standard deviation of the mean, scores between 80 and 95 and scores between 35 and 50 (yellow) represent scores that are 1 to 2 standard deviations above or below the mean, and scores above 95 or below 35 (red) represent scores that are more than 2 standard deviations above or below the mean.

Score Calculation Detail

The following table provides a summary of how the overall score was calculated from each of the individual competency scores. First, all competency scores are calculated on a scale of 0-100. Note that some competencies use their color category rather than their actual numeric score in the overall calculation. For these, a standard score associated with the assigned color category is used in the overall score calculation rather than the actual numeric score. This is reflected in the "Score Value Used" column. Next, a weighted average of scores is computed using individual competency weights, typically set using job analysis data provided by the US Government Occupational Information Network (O*Net).

| Competency | Score | How applied to overall | Score Value Used | Weight (%) |
|------------------------|---------|------------------------|------------------|------------|
| Basic Digital Literacy | 71.2602 | Numeric Score | 71.2602 | 100.0000 |
| Weighted Average: | | | | 71.2602 |
| Final Overall Score: | | | | 71 |
