

Candidate: **Betty Penske**  
Assessment: Core C++ Programming  
Completed: September 19, 2021  
Prepared for: Susan Bookman

## Test Results and Interview Guide

The Core C++ Programming assessment measures key factors related to high performance and tenure in this job. Attribute types measured include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

## Overall

Candidate	Score	Interpretation
<b>Betty Penske</b> bettypenske@yourcompany.org Core C++ Programming September 19, 2021  The candidate's scores indicate high performance potential in most jobs. We recommend that this score be used in conjunction with a comprehensive process for evaluating potential performance, including the specific knowledge, skills, and abilities required for a particular job.	<b>90</b>	 <b>Key</b> ▼ Candidate Score Higher Risk Lower Risk Custom Baseline (Optional)

## Competency Summary

Competency	Score	Interpretation
<b>Skills/Knowledge (relates to immediate readiness)</b>		
Core C++ Programming	90	

## Comparison

Percentile scores indicate how the candidate compares to other test-takers within various groups. The candidate scored equal to or better than the fraction of test-takers indicated by the percentile.

Test-Taker Group	Percentile	0	10	20	30	40	50	60	70	80	90	100	
Global	90th												
United States	74th												
HR Avatar Data	83rd												

## Assessment Overview

This assessment provides scores for 10 important personality factors that are related to success on the job. Scores are presented based on their potential impact on job performance.

Please note that personality tests, like this Attitudes, Interests, and Motivations survey ask the candidate to describe themselves. As a result, the results reflect how the candidate sees him or herself. In most cases, this equates to how the candidate actually behaves.

Remember also that scores on personality tests reflect behavioral tendencies and have no relationship with knowledge, skills or abilities.

## Detail

Candidate: **Betty Penske**, bettypenske@yourcompany.org  
 Assessment: Core C++ Programming  
 Authorized: September 19, 2021, by Susan Bookman, HR Avatar Data Collection Account, sue.bookman@richardson.biz  
 Started: September 19, 2021 at 11:52:19 AM EST  
 Completed: September 19, 2021 at 11:52:19 AM EST  
 Overall Score: 90

## Knowledge and Skills Detail

This section contains a list of job-related knowledge areas and skills that have been evaluated. Low scores in these areas often indicate that additional learning may be required before top performance can be achieved.

Detail	Interview Guide
<p><b>Core C++ Programming</b> Score: 90</p> <p><i>Description:</i> Evaluates the candidate's knowledge of the C++ programming language, with an aim to determine the degree of training that will be required before the candidate can be expected to become productive.</p> <p><i>Interpretation:</i> Candidate should achieve superior job performance in this area with little or no training.</p> <p>Scores indicate a solid working knowledge of the C++ programming language, syntax, and usage. Candidate is likely ready to be productive without basic training or with immediate entry into advanced training. Likely to be able to mentor others.</p>	<p>Tell me about a project or task where your knowledge of C++ was required for success. How did it go?</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">  1 Example didn't require or demonstrate knowledge.                 </div> <div style="text-align: center;">  2 Knowledge was only moderately important or moderately demonstrated in example.                 </div> <div style="text-align: center;">  3 Clearly relevant application and demonstration of knowledge.                 </div> <div style="text-align: center;">  4                 </div> <div style="text-align: center;">  5                 </div> </div>

## Identity Confirmation Photos

The following photos of the candidate and any identification were uploaded during the assessment session.

### Photo Analysis Results

- Risk:	Medium risk of cheating based on image inconsistencies
- Percent match among processed faces	100%
- Total images processed	17
- Total images with valid faces	14 (82%)
- Total pairs of faces compared	13
- Pairs in which faces matched	13 (100%)

## Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the assessment is scored. As additional instances are completed, the comparative data may change. You can always update a report to the current values by clicking on "Recalculate Percentiles" within the online results viewing pages at [www.hravatar.com](http://www.hravatar.com).
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 - 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 - 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.
- For non-linear competencies, scores in the middle are more desirable. For these scales a score between 50 and 80 (dark green) represents scores that are within 1 standard deviation of the mean, scores between 80 and 95 and scores between 35 and 50 (yellow) represent scores that are 1 to 2 standard deviations above or below the mean, and scores above 95 or below 35 (red) represent scores that are more than 2 standard deviations above or below the mean.
- Sim ID: 462-4, Key: 0-0, Rpt: 16, Prd: 280, Created: 2021-09-19 16:52 UTC
- UA: Mozilla/5.0 (Windows NT 6.3; Trident/7.0; Touch; rv:11.0) like Gecko

## Score Calculation Detail

The following table provides a summary of how the overall score was calculated from the individual competency scores. Competency scores are calculated on a 0-100 scale by first calculating a Z statistic based on test-taker responses and then transforming the Z value to a scale with target mean and standard deviation. Certain competencies have a normal score distribution where it is best to be closest to the mean. For these competencies we modify the Z statistic by multiplying its absolute value by minus 1 for the overall score calculation. Next, to calculate the overall score, a weighted average of all modified competency Z statistics is computed and this weighted average is itself transformed to a Z statistic, which is then transformed to a score with the same target mean and standard deviation. Finally outlier scores are adjusted if they are below 0 or above 100.

Competency	Score	How applied to overall	Score Value Used	Weight (%)
Core C++ Programming	90.2701	Z-Statistic	1.6847	100.0000
Weighted Average of Competency Z-Scores:				1.6847
Mean applied to Raw Weighted Avg:				0.0000
Standard Deviation applied to Raw Weighted Avg:				1.0000
Normalized Raw Score:				1.6847
Mean:				65.0000
Standard Deviation Used:				15.0000
Final Overall Score:				90.2701
