

Candidate: **Betty Penske** Assessment: Digital Adaptability Completed: July 27, 2024 Prepared for: Susan Bookman HR Avatar Data Collection Account

Test Results and Interview Guide

The Digital Adaptability assessment measures key factors related to high performance and tenure in this job. Attribute types measured vary by test, but can include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

Assessment:	Digital Adaptability
Authorized:	July 27, 2024, by Susan Bookman, HR Avatar Data Collection Account, sue.bookman@richardson.biz
Started:	July 27, 2024, 12:24:23AM EST
Completed:	July 27, 2024, 12:24:23AM EST
Overall Score:	73

Personality Characteristics Detail

This section contains a list of personality characteristics that are frequently associated with job performance. Remember, these are not skills and do not indicate the ability to do a job. Rather, they can be used to evaluate the candidate's fit with the general needs of the job and the organizational culture. Sample interview questions are provided to gather more information.

etail	Interview Guide				
Resourcefulness Score: 82	How do you view o	hange	s at work?		
0 20 40 60 80 100 Description: This scale reflects how resourceful a person is	1 Wants things to	2 2	3	☆ 4	5 Soos chango as an
when there are frequent or substantial changes related to digital advancements in his or her job requirements. Changing work requirements related to new technology usually cause stress and put pressure on an individual to adapt and be resourceful. High scorers usually thrive when new opportunities are coming their way, while low scorers may feel overwhelmed. In more stable job circumstances, high scorers may become bored, while low scorers would remain satisfied.	stay the same. Thinks about personal impact.		Is able to see growth opportunity but focuses equally on how the change impacts them.	ng at v	Sees change as an opportunity to grow. Finds change is a motivator for them.
Interpretation:	$\widehat{\mathbf{A}}$				\Rightarrow
The candidate's score in this area should contribute to enhanced overall job performance.	1	2	3	4	5
Actively seeks and makes full use of all resources that are available to achieve objectives and learn new technologies and skills. Often encourages	No effective technique to staying positive during change.		Partially effective approach to change.		Multiple effective techniques for dealing with change.

Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the assessment is scored. As additional instances are completed, the comparative data may change. You can always update a report to the current values by clicking on 'Recalculate Percentiles' within the online results viewing pages at www.hravatar.com.
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.

Score Calculation Detail

The following table provides a summary of how the overall score was calculated from each of the individual competency scores. First, all competency scores are calculated on a scale of 0-100. Note that some competencies use their color category rather than their actual numeric score in the overall calculation. For these, a standard score associated with the assigned color category is used in the overall score calculation rather than the actual numeric score. This is reflected in the "Score Value Used" column. Next, a weighted average of scores is computed using individual competency weights, typically set using job analysis data provided by the US Government Occupational Information Network (O*Net).

Competency	Score	How applied to overall	Score Value Used	Weight (%)
Resourcefulness	82.7987	Numeric Score	82.7987	33.3333
Willingness to adapt	72.8051	Numeric Score	72.8051	33.3333
Willingness to mentor	64.5057	Numeric Score	64.5057	33.3333
