# Test Results and Interview Guide

The Sensing Customer Needs (Game-Based) assessment measures key factors related to high performance and tenure in this job. Attribute types measured vary by test, but can include cognitive ability, skills, knowledge, personality characteristics, emotional intelligence, and past behavioral history. This report includes a one page summary, followed by detailed results with an embedded interview guide. Note that these results should always be used as a part of a balanced candidate selection process that includes independent evaluation steps, such as interviews and reference checks.

## Overall

Candidate	Score	Interpretation
<b>Betty Penske</b> bettypenske@yourcompany.org Sensing Customer Needs (Game-Based) April 30, 2024  Consistent ability to reliably identify needs based on limited input from the customer.	<b>88</b>	 <div style="border: 1px solid gray; padding: 5px; margin-top: 10px;"> <b>Key</b>                      ▼ Candidate Score  <span style="color: red;">■</span> Higher Risk  <span style="color: green;">■</span> Lower Risk  <span style="color: blue;">■</span> Custom Baseline (Optional)                 </div>

## Competency Summary

Competency	Score	Interpretation
<b>Skills/Knowledge (relates to immediate readiness)</b> Sensing Customer Needs	<b>88</b>	

## Comparison

Percentile scores indicate how the candidate compares to other test-takers within various groups. The candidate scored equal to or better than the fraction of test-takers indicated by the percentile.

Test-Taker Group	Percentile	0	10	20	30	40	50	60	70	80	90	100	
Global	88th												
United States	73rd

## Detail

Candidate: **Betty Penske**, bettypenske@yourcompany.org  
 Assessment: Sensing Customer Needs (Game-Based)  
 Authorized: April 30, 2024, by Susan Bookman, HR Avatar Data Collection Account, sue.bookman@richardson.biz  
 Started: April 29, 2024, 11:02:35PM EST  
 Completed: April 29, 2024, 11:02:35PM EST  
 Overall Score: 88

## Knowledge and Skills Detail

This section contains a list of job-related knowledge areas and skills that have been evaluated. Low scores in these areas often indicate that additional learning may be required before top performance can be achieved.

Detail	Interview Guide
<p><b>Sensing Customer Needs</b> Score: 88</p> <p><i>Description:</i> Measures the ability of the candidate to discern the wants and needs of inbound callers based only on listening to one or more short statements from the caller.</p> <p><i>Interpretation:</i> Candidate should achieve superior job performance in this area with little or no training.</p> <p>Significantly above-average ability to identify needs based on limited input from a caller.</p>	<p>What are some techniques you can use to determine what a customer really needs?</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">★ 1 Unable to articulate any valid techniques with confidence</div> <div style="text-align: center;">★ 2 Describes one or two valid techniques</div> <div style="text-align: center;">★ 3 Describes multiple techniques (listening, probing, waiting)</div> <div style="text-align: center;">★ 4</div> <div style="text-align: center;">★ 5</div> </div> <hr/> <p>Describe a time when your job required you to help other people solve their problems. How did you perform in that role? Did you enjoy it?</p> <div style="display: flex; justify-content: space-around; align-items: center;"> <div style="text-align: center;">★ 1 Unable to describe a relevant role. Struggled with duties.</div> <div style="text-align: center;">★ 2 Partially relevant example. Average performance. Moderate interest.</div> <div style="text-align: center;">★ 3 Clear description of customer service role. Positive performance and interest.</div> <div style="text-align: center;">★ 4</div> <div style="text-align: center;">★ 5</div> </div>

## Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the assessment is scored. As additional instances are completed, the comparative data may change. You can always update a report to the current values by clicking on "Recalculate Percentiles" within the online results viewing pages at [www.hravatar.com](http://www.hravatar.com).
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 - 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 - 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.
- Sim ID: 15764-1, Key: 0-0, Rpt: 68, Prd: 6536, Created: 2024-04-30 04:02 UTC

## Score Calculation Detail

The following table provides a summary of how the overall score was calculated from the individual competency scores. Competency scores are calculated on a 0-100 scale by first calculating a Z statistic based on test-taker responses and then transforming the Z value to a scale with target mean and standard deviation. Certain competencies have a normal score distribution where it is best to be closest to the mean. For these competencies we modify the Z statistic by multiplying its absolute value by minus 1 for the overall score calculation. Next, to calculate the overall score, a weighted average of all modified competency Z statistics is computed and this weighted average is itself transformed to a Z statistic, which is then transformed to a score with the same target mean and standard deviation. Finally outlier scores are adjusted if they are below 0 or above 100.

Competency	Score	How applied to overall	Score Value Used	Weight (%)
Sensing Customer Needs	88.9051	Z-Statistic	1.5937	100.0000
Weighted Average of Competency Z-Scores:				1.5937
Mean applied to Raw Weighted Avg:				0.0000
Standard Deviation applied to Raw Weighted Avg:				1.0000
Normalized Raw Score:				1.5937
Mean:				65.0000
Standard Deviation Used:				15.0000
Final Overall Score:				88.9051
