## Artificial Intelligence (AI) Generated Scores

Personality Summary	-	-	<p>Summary Points (AI):</p> <ul style="list-style-type: none"> <li>(Generic Text for Sample Report) Exceptionally high drive and resilience — pursues goals with strong energy, persistence, and the ability to bounce back from setbacks.</li> <li>Highly adaptable — adjusts effectively to changing circumstances and new challenges.</li> <li>Strong integrity — trustworthy, principled, and reliable in her actions and commitments.</li> <li>Moderate empathy and emotional self-control — reasonably aware of others' emotions and generally manages her own, with some room for growth.</li> <li>Low teamwork score is a key development area — may prefer working independently and could struggle with collaboration, shared responsibility, and group-oriented goals.</li> </ul> <p>Narrative (AI): Shantel Cunningham demonstrates a compelling combination of drive, adaptability, and resilience that positions her as a highly motivated and determined individual. She pursues her goals with exceptional energy and persistence, and is able to pivot and adjust effectively when faced with new or changing circumstances. Her strong resilience means she recovers well from setbacks and maintains her focus under pressure, making her a dependable performer in challenging environments.</p> <p>Shantel also shows solid integrity, suggesting she is honest, principled, and trustworthy in her actions and decisions. Others can generally count on her to do the right thing and follow through on her commitments. Her moderate level of empathy and emotional self-control indicates she has a reasonable awareness of others' feelings and can manage her own emotions in most situations, though there may be occasional moments where emotional regulation could be further developed.</p> <p>The most notable area for growth for Shantel is teamwork, where her score falls significantly below her other traits. This suggests she may prefer working independently and could find it challenging to collaborate closely with others, share responsibilities, or prioritize group goals over individual ones. In team-based settings, she may come across as less cooperative or engaged with her colleagues, which could create friction or limit her effectiveness in roles that require strong interdependence and collective effort.</p> <p>Overall, Shantel is a driven, resilient, and adaptable individual with strong personal values. To maximize her impact in team environments, she would benefit from intentionally developing her collaborative skills, actively seeking opportunities to contribute to group success, and building stronger interpersonal connections with teammates.</p> <p>Computed on: April 3, 2026, 1:56:47AM EDT</p>

## Report Preparation Notes

- Hiring decisions should never be based on a single source of information. The most effective use of this assessment report is as a part of a multi-faceted program of candidate evaluation that includes resume review, interviews, and reference checks.
- Overall vs Percentiles Scores: The overall score reflects the success in the test, based on the mean (average) and standard deviation of the test scores. The percentile score reflects the percentage of test-takers who scored equal or below this overall score. We recommend you use the Overall Score as your primary evaluation criteria. However, percentile scores can often be useful in comparing specific candidates against one another and with a group, such as for test takers in a certain organization or within a certain account.
- Note that comparison information is calculated based on completed instances of this assessment at that time the assessment is scored. As additional instances are completed, the comparative data may change. You can always update a report to the current values by clicking on 'Recalculate Percentiles' within the online results viewing pages at [www.hravatar.com](http://www.hravatar.com).
- Most competency scores are norm-based, which means that they can be interpreted in terms of their distance from the average or mean score. For all scales, a score equal to the mean receives a score of 65 and scores above and below this value are set so that a score change of 15 equals one standard deviation.
- For linear competencies, higher is better across the entire scale. For these scales a score between 65 and 80 (light green) represents 0 to 1 standard deviation above the mean and a score above 80 (dark green) represents more than one standard deviation above the mean. Similarly, a score of 50 - 65 (yellow) represents 0 to 1 standard deviation below the mean, while a score of 35 - 50 (orange) equates to 1 to 2 standard deviations below the mean, and a score below 35 represents more than 2 standard deviations below the mean.
- This assessment makes use of data from the Occupational Information Network (O\*NET), which is funded by the U.S. Federal Government - U.S. Department of Labor/Employment and Training Administration (USDOL/ETA) - as a primary source of occupational information. The O\*NET database contains information on hundreds of standardized and occupation-specific descriptors that are continually updated by ongoing research. These data are used in preparing descriptive information as well as setting relative weights between competencies used in calculating the overall score. ## Score Calculation Detail

The following table provides a summary of how the overall score was calculated from the individual competency scores. Competency scores are calculated on a 0-100 scale by first calculating a Z statistic based on test-taker responses and then transforming the Z value to a scale with target mean and standard deviation. Certain competencies have a normal score distribution where it is best to be closest to the mean. For these competencies we modify the Z statistic by multiplying its absolute value by minus 1 for the overall score calculation. Next, to calculate the overall score, a weighted average of all modified competency Z statistics is computed and this weighted average is itself transformed to a Z statistic, which is then transformed to a score with the same target mean and standard deviation. Finally outlier scores are adjusted if they are below 0 or above 100.
